

## Göktuğ YILDIZ

### SUMMARY

During my education in mechanical engineering, I have always had an interest in the field of software. Because of this interest, I took on responsibilities such as algorithm design, coding, design, reporting, and presentation in all the projects I did during my undergraduate studies in order to nurture my desire to become a software developer. Thanks to my English education I received abroad (China), I was able to adapt quickly to all programming languages and improve myself rapidly with my knowledge of engineering documentation. I want to continue to be a part of this industry and make it my lifestyle.
